

DL1093

Digital 3-in-1 Wall Scanner

The DL1093 is a compact high accuracy 3-in-1 wall scanner which detects voltage, studs and metal behind plasterboard walls. The wall scanner has easy to use function keys, which makes detecting fast and reliable. The DL1093 also has a built-in torch for poorly lit areas.

Once you have set the material you are detecting, each material will track at different depths, the DL1093 uses a "press to scan" system to calibrate the unit to each surface. When the "ready" symbol illuminates the instrument is set to accurately scan. Simply move the scanner across the surface and the digital proximity display will indicate where the object is located.

Features

- Wooden and Metal Stud Detection
- Metal Pipe Detection
- Dynamic LCD and Audible Indication
- Wooden/Metal Stud Detection to 30mm
- Metal Pipe Detection 50mm
- Voltage Detection 75mm
- Press to scan button to conserve battery life
- Market Pin to discreetly imprint plasterboard

Specifications

Measurement	
Wood	≥ 30mm
Metal	≥ 50mm
Voltage	≥ 75mm
Other Information	
Battery	9V PP3
Dimensions	160x74x42mm
Weight	154g

All Di-log Wall Scanners
supported by a
2 Year Warranty
